The mini-chest slotted shim set includes 20 of each of the following thicknesses: 0.002", 0.003", 0.004", 0.005", 0.10", 0.015", 0.020", 0.030", and 0.060". In addition to our standard sizes, we also manufacture custom motor shims quickly and economically.

Understanding and Utilizing Slotted Shims:

Slotted Shims are thin pieces of material with a slot that allows for easy installation and removal around bolts or other fasteners. They are essential for filling gaps and making precise adjustments to the alignment of motors and other components. A Motor Shim Kit typically contains an assortment of Slotted Shims in various thicknesses to accommodate different alignment needs. Whether you require the non-conductive properties of Plastic Slotted Shims, the durability of Metal Slotted Shims, or the superior corrosion resistance of Stainless Steel Slotted Shims, Artus has the right solution.

The Color Tells the Thickness

Color-coded products are available in aluminum and plastic for your convenience. Each color represents a specific shim thickness, making distinguishing between thicknesses quick and easy. With variations in shim thickness being as little as 0.00025", differentiating by the color instead of measuring shims drastically saves time and reduces errors.

Simplify Your Shim Setup

Streamline your workflow with clearly marked, color-coded shims. Whether you're working in plastic or aluminum, it's the fastest way to align with confidence.
